

SYSTEM FOR MANAGING A USER PROFILE IN A RADIOPHONIC SYSTEM.

5 ABSTRACT

A system for enabling a subscriber to determine the current mode of use of a mobile telephone terminal (11-2). The subscriber selects a subscriber profile according to a technical characteristic of the mobile telephone terminal (11-2).

10 The user sends a request signal to an administration means (11-3) of a radiocommunication system. The administrator (11-3) returns the mode of use selected by the user, via software and hardware interfaces.
